

SPARK

(Small Packaged Assisted Rescue Kit)

The Tech Safety Lines SPARK is a component-based Assisted Rescue Kit. All components are easy to use and can be brought in to or taken out of a rescue procedure, depending on the complexity of the rescue event. Rescue considerations when designing the SPARK include hub/blade extractions, ladder/platform operations, and victim access/rescue from the top of the nacelle. Basic components of the SPARK include a self-contained 6:1 pulley system, anchor materials, and connective hardware.

Meets or exceeds all applicable OSHA & ANSI Standards

Assisted Rescue	
SPARK	6.1 lbs.
